

General Aspects of Clean Rooms and Gowning

Course description

“General Aspects of Clean Rooms and Gowning” is designed for operators in the medical devices industry, providing a comprehensive understanding of the critical elements associated with cleanroom environments. This course delves into the significance and purpose of cleanrooms, elucidating the gowning process and detailing the protocols for working within these controlled environments. Participants will gain insights into environmental and pest controls, including microbiological tests, foreign matter prevention, and strategies for managing potential contaminations.

At the end of the course you will able to:

- Grasp the importance and purpose of cleanrooms, recognizing their role in ensuring the quality and integrity of medical device production.
- Be proficient in the proper gowning procedures, understanding how to don and doff cleanroom attire to minimize contamination risks.
- Implement effective environmental and pest control measures, including microbiological testing, prevention of foreign matter, and strategies for managing potential pest-related issues.
- Adopt appropriate behaviors within cleanroom environments, fostering a culture of cleanliness, adherence to protocols, and proactive contamination prevention.

Main topics

- 1 Importance and purpose of the cleanroom
- 2 Gowning process
- 3 Work within the cleanroom
- 4 Environmental and Pest Controls
 - Microbiological test
 - Foreign matter
 - Plagues
- 5 Behaviors in cleanroom
