

Basics of Nonconformities

Course description

“Basics of Nonconformities” is a foundational course designed for operators in the medical devices industry, providing essential knowledge on identifying and managing nonconformities. The course covers the definition of nonconformities and explores non-conforming products and non-conformities within the quality system. Participants will learn the appropriate actions to take in case of a nonconformity and understand the processes involved when handling non-conforming products, ensuring adherence to quality standards and regulatory requirements.

At the end of the course you will be able to:

- Be adept at identifying nonconformities, understanding what constitutes a non-conforming product, and recognizing nonconformities within the quality system.
- Know the appropriate steps to take when a nonconformity is identified, ensuring prompt and effective resolution to maintain product quality and compliance.
- Understand the processes involved in managing non-conforming products, including the proper disposition and documentation, preventing their release into the market.
- Be equipped to uphold quality system standards, contributing to a culture of continuous improvement and maintaining the integrity of medical device manufacturing processes.

Main topics

- 1 What is a non-conformity?
- 2 Non-Conforming Product
- 3 Non-conformity at the Quality system
- 4 What to do in case of non-conformity?
- 5 What happens to a non-conforming product?
